Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This pair of two-bay-wide, two-story brick houses with low-pitched gable roofs are typical of the small alley houses built in Baltimore in the 1850s, often along especially narrow secondary alley streets running perpendicularly off the main "alley" street. In many cases, alley houses such as these are still occupied by working class families and many are still covered with the formstone put on in the 1950s or 1960s.

The houses are two stories in height, 12'6" wide and occupy lots 64' deep. Each house is only two-rooms deep. The pitch of the gable roof is especially low, a characteristic of this particular type of two-story, gable-roofed alley house. The houses are probably constructed in common bond, which was originally painted, but both facades are now covered with formstone. Each house has a simple brick corbelled cornice, now obscured by the formstone covering. Chimneys are located at the rear end of the house.

Door and window openings may have flat wood lintels and sills but they are hidden by the formstone. All windows are filled with replacement 1/1 sash. One house has had its first floor window replaced with a more fashionable wider window with stained glass transom (introduced to Baltimore rowhouses in the early 1900s); the other has a more contemporary treatment. No original doors survive but each doorway had a single light transom. The houses sit on low basements, lit by a narrow window, each entrance being reached by a single brick step.

The houses are basically two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace.

Specific dates c. 1850 - 1860

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

These houses are significant as being representative of a surviving group of extremely modest two-story, gable-roofed houses built in Fells Point in the 1850s and 1860s to serve as inexpensive housing for the influx of newly arrived immigrant families seeking work in harbor-related activities or in the first small factories being built at this time. Houses sold for about \$500 - \$600 to mainly German-American craftsman and laborers, or rented for some \$8 a month. Most such houses were held as rental property and most were located along narrow alley streets, or along even narrower courts. In terms of design, the houses are basically the descendants of earlier Federal-style working class housing built in the early decades of the century, but without the usual dormer story of such houses. Because there is no dormer story the roof slope is much less steep in these later versions of the style. The houses are quite tiny, with two small rooms on each floor and a centrally located, tightly winding, narrow staircase.

They are still inhabited by working class residents.
